

Eero Hiironen: The wind starts, Water surface & Water and earth

Have you ever been on the shore of a water, or in a stagnant boat on a lake, when the wind starts to blow in the middle of completely calm weather? At first, shallow waves start to form on the surface of the water. What does the water sound like when it hits the side of the boat?

The sculptures in the central hall are set on their side so that we could get to know Eero Hiironen's technique in more detail. At close range or slowly going around the sculpture you can see the artist's mastery of creating reflections and shimmering surfaces.
